

Edinbane Wind Farm

Spring 2010

In the winter newsletter we reported that thirteen turbines had been erected. We are pleased to report that these are now generating clean electricity. The turbines are currently undergoing final tests, and each will be taken out of service for a couple of days to complete this, before being switched back on to operate normally.

Delivery of tower sections, Sligachan

The tower sections are raised into vertical position

The last batch of five turbines will start being delivered in the last week of February, and, weather permitting, start being erected in March. It has been a rare snowy winter on Skye, and we are glad we took a short break, but hope now that spring is kind.

The rotor assembly is lifted into position

We understand that there is a lot of interest in the development, but as the wind farm is a construction site we have to restrict access as it can be dangerous, so we are taking this opportunity to show some pictures of the wind farm under construction, which we hope you find interesting.
