

THANET OFFSHORE WIND FARM

CONSTRUCTION UPDATE (KENT) Beginning of March 2009

Port of Ramsgate

Dredging of the port is continuing and from March 4th there are three dredgers at work.

These photos were taken in February

Work on the pontoons is progressing well. Porta-cabins with power have been installed for the marine supervisor's office and security. The warehouse has been cleaned and refurbished. Two port technicians have been hired and have begun training.

Onshore Cable

The roadworks on the A256 are progressing well. As they are taking place during weekends only, there is minimal disruption to road users. The section being done now is near a roundabout so that has caused minor delays to traffic flow. This will be passed in the next few weeks. A new machine, "The Rottweiler", has been brought in to speed up work. Please see photo.
