

Port of Ayr

The Port of Ayr will play a crucial role in the delivery of turbine components to South Kyle Wind Farm.

Throughout Spring 2022, the Port of Ayr, will be receiving wind turbine towers and blades for South Kyle and will play a crucial role in storing and transporting these important components to site.

Run by the Association of British Ports, Ayr is the primary import port for wind farm machinery in the West Coast of Scotland.

The Port of Ayr's relationship with Vattenfall has spanned a decade and goes back to when the initial application for South Kyle was submitted. Stuart Cresswell Chairman of the British Ports Association Scottish Ports Group and Ayr Port Manager commented:

"Working with Vattenfall will have a major positive impact locally and will bring a real economic boost to the area. The import of turbines and machinery via Port of Ayr directly helps to create local employment, with more staff employed.

They also bring in several Ayrshire-based sub-contractors who have expertise in dealing with turbines and renewables equipment. When expertise from outside the area is required, there are still benefits to local accommodation providers, shops, newsagents and cafes."

Supplier Directory

There are companies of all sizes and backgrounds working and thriving in the onshore wind industry.
