**Viewpoint Parameters**

OS reference:	E53 839, N839 482
Ground Level Elevation:	143m AOD
Camera Height:	1.5m AGL
Direction of view to site centre <sup>3</sup> :	235°
Distance to nearest lit turbine:	12,510m
Number of nacelle lighting units theoretically visible <sup>4</sup> :	1
Date and time of viewpoint photography:	11/09/2019 @ 20:55
Camera:	Nikon D600
Lens:	Nikon 50mm f/1.8

**Information on the limitations of visualisations:**

Visualisations of wind farms have a number of limitations which you should be aware of when using them to form a judgement on a wind farm proposal. These include:

- A visualisation can never show exactly what the wind farm will look like in reality due to factors such as: different lighting, weather and seasonal conditions which vary through time and the resolution of the image;
- The images provided give a reasonable impression of the scale of the turbines and the distance to the turbines, but can never be 100% accurate;
- A static image cannot convey turbine movement, or flicker or reflection from the sun on the turbine blades as they move;
- The viewpoints illustrated are representative of views in the area, but cannot represent visibility at all locations;
- To form the best impression of the impacts of the wind farm proposal these images are best viewed at the viewpoint location shown;
- The images must be printed at the right size to be viewed properly (260mm by 820mm);
- You should hold the images flat at a comfortable arm's length. If viewing these images on a wall or board at an exhibition, you should stand at arm's length from the image presented.
- The ZTV presented here takes no account of the screening effects of vegetation or buildings.

**Additional notes:**

1. This figure has been based on the following parameters:  
 Turbine layout file: CLASHINDARROCH II.WFL  
 • Hub height: 110m  
 • Rotor diameter: 140m  
 • Height to blade tip: 180m
2. Turbine positions could be subject to micro-siting (typically up to 50m).
3. Direction given as bearing relative to Grid North (BNG).
4. The number of turbine blades and hubs theoretically visible is counted from the wireframe in sets of 3 and ignores the screening effects of any intervening objects and forestry.
5. This figure is produced in accordance with SNH Visual Representation of Wind Farms 2017 guidance and also broadly accords with the Landscape Institute's Technical Guidance Note 6/19 (Type 4 Visualisation).

**Photomontage (2000cd Intensity Lighting)**

Note: The light intensity at this location would be between 800-265cd during periods of poor visibility in any direction within 5km. The photomontage provides an impression of the proposed lighting intensity at 2000cd and assumes clear visibility from the viewpoint location.

OS reference:	E353 839, N839 482	Horizontal field of view:	53.5° (planar projection)	Camera:	Nikon D600

Photomontage (200cd Intensity Lighting)

Note: The light intensity at this location would be between 80-27cd during periods when the visibility is clear for 5km in all directions from the light source. The photomontage provides an impression of the proposed lighting intensity at 200cd and assumes clear visibility from the viewpoint location.
